## GATE - CHEMISTRY

## MOCKTEST PAPER

- There are total of 65 questions in this paper which are of multiple choice type or numerical answer type.

Questions Q. 1 - Q. 25 carry 1 mark each. Questions Q. 26 Q. 55 carry 2 marks each. The 2 marks questions include two pairs of common data questions and two pairs of linked answer questions depends on the answer to the first question of the pair. If the first question in the linked pair is wrongly answered or is not attempted, then the answer to the second question in the pair will not be evaluated.

- Questions Q. 56-Q.65 belong to General Aptitude (GA) section and carry a total of 15 marks. Questions $Q .56$ Q. 60 carry 1 mark each, and questions Q. 61 - Q .65 carry 2 marks each.
- There will be negative marking of $1 / 3$ marks for each wrong answer for 1 mark questions. For all 2 marks questions $2 / 3$ marks will be deducted for each wrong answer. However, in the case of the linked answer question pair, there will be negative marks only for wrong answer to the first question and no negative marks for wrong answer to the second question. There is no negative marking for questions of numerical answer type.
